A group of locals prepares for chainsaw training as part of a unique training partnership between TAFE NSW and ForestWorks.

benefited from the training.

The Snowy region's Harvesting and Rooding manager, Campbell Sanderson said Forestry Corporation had worked closely with

TAFE NSW to ensure that industries training needs were met.

"It's been a significant and much needed boost for the local forest and timber in-

dustry, as it's given us an opportunity to train workers with essential skills, across the value chain, post the devastating Black Summer bushfires," Mr Sanderson

said.

"The funding and focus on industry specific training has filling a significant training gap and built stronger relationships and networks with

training service provided. The program has been strongly supported and clearly demonstrates the need to continue investing in and building skills across industry and communities.

Short courses being delivered as part of the project include plantation for operations, chainsaw operations, white card, working heights, chain of responsibility, fatigue management, forklift, civil construction machinery operations and first aid. Full qualifications include a Certificate IV in Work, Health and Safety, Certificate IV in Leadership Management and a Certificate III in Water Operations.

TAFE NSW Senior Project Officer Margaret Middleton said TAFE NSW had worked closely with industry to tailor courses to the changing needs of employees.

"The Snowy Valleys economy is so tied to the timber industry that it was disproportionately impacted by Black Summer bushfires," Ms Middleton said.

"TAFE NSW is proud supporting local communities by giving impacted workers the hands-on, practical skills to change careers or upskill in their current career."

"The courses have extremely well received by students and industry. We look forward to supporting the timber industry into the future."

Timber workers take up skills training

Timber workers in Snowy Mountains and adjoining areas are taking advantage of the opportunity to gain new skills and recognition for experience. The financial support from the Snowy Valley Skills Development Services (SVSDS).

Timber workers in the area to take advantage of training opportunities. Completed, training courses are organised and delivered through 5 organisations.

Employers who employ a variety of timber workers and contractors and provide training opportunities.

With the help of training providers, timber workers have been progressing through training programs from industry competency such as the Skills Set, and other programs such as Business Skills.

A number of

Registered Training Organisations (RTO) to provide the training required by the employees after the bushfires to increase their knowledge and employability now and into the future.

There are Plantation Forest Operator 2-day courses coming up in the next few months which are open to all forest operators in the Snowy Valley region.

Many more courses are in the pipeline and will be promoted throughout the region as they become available.

"I encourage any employers associated with the forest industry in the Snowy Valley to contact me to see what training may be available for their business," said Chris Carmody, Local Area Coordinator for SVSDS. Anyone who would like to attend training or arrange training for their workers and haven't already been in contact with the SVSDS Project Team, can do so by contacting Chris at svsds@forestworks.com.au.

Funding for Snowy Valley Skills Development Services was achieved from a successful Bushfire Local Economic Recovery (BLER) Fund application by ForestWorks. The BLER Fund is jointly funded by the Australian and NSW Governments.
